

India's realtime elder care operating system.

LDERLY coordinates care for ageing parents through a customer app, caregiver app, and ops command center. The product is designed to reduce family anxiety in realtime: booking care, dispatching caregivers, tracking visits, managing emergencies, and giving families proof that their loved one is okay.

CORE PROMISE

Care arrives on demand. Family trust stays live.

Built as an operational platform, not a listing marketplace: family booking, caregiver dispatch, live location, OTP visit start, care updates, payment release, and ops escalation.

Active production app

Next.js, Firebase, Vercel, Sentry, PostHog, Microsoft Clarity, Razorpay-ready, Google Maps / Routes integration, Android caregiver foundation.

3 apps

Customer, caregiver partner, admin/ops

Live OS

Booking, dispatch, ETA, visit proof, escalation

India-first

Family coordination, NRI reassurance, trusted local care

Families need continuous assurance, not another service directory.

The pain

- Working professionals and NRI families cannot reliably monitor parents throughout the day.
- Care services are fragmented across attendants, labs, pharmacies, doctors, emergency contacts, and family members.
- Most elder care apps behave like static booking platforms, with weak live tracking and poor operational accountability.
- Emergency response is usually manual, delayed, and difficult for families to verify remotely.

Why now

- India's ageing population is growing while adult children are increasingly mobile and urban/NRI.
- Families already trust app-led logistics for rides, food, payments, and delivery. Elder care is ready for the same operational layer.
- Realtime location, push, payments, AI summaries, and low-cost cloud infrastructure make a care OS viable.
- Trust, verification, and operational proof can become the moat.

Product thesis: the winning elder care platform will not be a marketplace. It will be a realtime trust and operations layer for families.

Target users

NRI families

Remote visibility, visit proof, monthly care summaries, emergency coordination, payments.

Working professionals

Quick care booking, live tracking, doctor/lab support, recurring care, family updates.

Seniors

Assistance, companionship, medicine support, hospital visit help, immediate assistance.

Three coordinated apps on one backend.

Customer

Books care for parent/self, pays, tracks caregiver, receives updates.

Dispatch

Ops monitors booking, risk, SLA, assignment, escalation.

Caregiver

Accepts assignment, shares location, starts via OTP, uploads care proof.

Live Care

Family sees ETA, visit progress, notes, medicines, vitals, reports.

Completion

Customer verifies, rating/rebook, payment release workflow.

Customer app

- Lead registration and customer login
- Care recipient flow: mother, father, self/others
- Guided booking funnel by care need, service, duration, location
- Payment terms modal and Razorpay checkout path
- Realtime care tracking with live route ETA foundation
- Trust UI: caregiver verification, visit proof, family updates

Caregiver app

- Partner login and assignment view
- Accept/reject workflow hidden from customer until assigned
- Mark en route, arrived, start visit, complete visit
- OTP start verification
- Vitals, medication, proof upload, incident and SOS workflows
- Android native foundation for background GPS

Admin / Ops command center

Live bookings, caretaker assignment, SLA risk, emergency queue, escalation, audit logs, operational analytics, lead management, Google sync health, backup/recovery, support workflows, finance actions, and readiness checks.

Operational infrastructure creates defensibility.

Current production stack

Next.js 16, React 19, TypeScript, Tailwind v4, Firebase, Firebase Admin SDK, Vercel, Sentry, PostHog, Microsoft Clarity, Razorpay integration, Google Maps / Routes, Playwright E2E, Android caregiver foundation.

Technical capabilities already built

Customer funnel

Emergency flow

Why LDERLY is not just an app

- It captures operational event history across customer, caregiver, ops, payment, emergency, and reporting flows.
- It can build proprietary reliability scores, dispatch intelligence, caregiver performance signals, and family trust loops.
- It connects multiple offline care workflows into one command system.

Data moat potential

- Caregiver punctuality, reliability, acceptance, and visit quality.
- Care recipient routines, medicine adherence, vitals, mood, mobility, and escalation history.
- Ops SLA patterns by geography, service type, time, and partner availability.

Investor framing

LDERLY can compound from a care coordination app into a logistics-grade elder care network: verified caregivers, diagnostic partners, hospitals, ambulance links, pharmacy workflows, subscription care plans, and AI-generated family assurance.

Start narrow, prove trust, scale the operating layer.

Phase 1

Controlled launch

Launch in a focused city/zone with curated caregivers, manual ops supervision, phone/WhatsApp-assisted onboarding, and high-touch service recovery.

Phase 2

Subscription care

Recurring care plans, preferred caregiver, monthly reports for NRIs, medicine/lab/doctor visit bundles, and family collaboration.

Phase 3

Partner network

Hospitals, labs, pharmacies, ambulance providers, physiotherapy, home nursing, and SLA-linked partner operations.

Phase 4

AI care intelligence

Daily summaries, anomaly detection, missed medicine risk, caregiver note cleanup, ops risk alerts, and longitudinal elder care insights.

Commercial model

- On-demand booking fee per visit
- Subscription care packages
- Premium NRI monitoring plans
- Partner referral or coordination revenue
- Enterprise/family office elder care support

Near-term asks

- Field pilots with verified caregivers and ops playbook
- Provider setup: Razorpay reconciliation, WhatsApp/MSG91/Exotel, App Check enforcement
- Native caregiver GPS QA on Android devices
- Operational hiring: dispatch, support, caregiver onboarding
- City-level demand generation and NRI acquisition testing

Investment narrative: LDERLY is building the trust infrastructure for ageing India, starting with realtime family assurance and expanding into care operations, emergency coordination, and partner healthcare logistics.
